Mrs Filstrup, wife of president of Covet Mfg Co

Covet Mfg Co covers are also found with John V. Farwell Co, United States Automatic Vending Co, Brinkerhoff Vending Machine Co, Mail-O-Meter Co and their own private perforated stamps.
One reason is that A.W. Filstrup, the president of the company was a stamp collector.

*Type III
Issue of 1906-1908*

The 4¢ Grant issue of 1902 was made in an imperforated form in 1908 for the Schermack Mailing Machine Company for two of their customers, Hamilton Carhart Company and Winfield Printing Company.

A Detroit stamp collector, Karl Koslowski, lived near Schermack and someone living in the same house as he worked at the company, so Koslowski spent time at the plant.

On May 27, 1908 Koslowski was planning to leave for a trip to his home country of Latvia and stopped by the plant. There he saw a delivery of sheets of stamps waiting to be processed. In the shipment were 25 sheets of 400 imperforated stamps, 10000 stamps.

Not wanting to spend \$16.00 on a sheet of 400 that was offer to him, he left. The next morning before leaving on his trip he went back to buy whatever he could. He found that the sheets were all perforated with the Schermack Type III style and distributed to their two customers. He went to Winfield, which was closer, and was able to purchase 50 perforated stamps for \$2.00. He then left Detroit to go on his trip.

Months later on his return to tried to buy more but there were none to be found. The rest is history.

"Pink Back" variety occurred on the Washington-Franklin stamps.
Because of the poor quality of the red aniline ink,
which was a coloring agent for brighter colors,
a bleeding effect into the paper caused a pinkish coloration.

JERSEY CITY, N. J.

*111 Fifth Avenue,
New York,*

Aug. 13, 1914.

Mr. A. Hamilton,

79 Pool St.

Biddeford, Me.

Dear Sir:-

REQUEST FOR RIZ LA CROIX CIGARETTE PAPERS AND BOOKLETS

In response to your request we are sending you to-day, herewith, a book containing 125 leaves of our famous RIZ LA CROIX Cigarette Papers. Our artistic brochure which tells with interesting detail of the care and skill brought to the manufacture of these perfect papers will be sent to you as soon as it is off the press.

The last word in good taste among fastidious smokers is to make up one's own cigarettes from his own favored mixture of tobacco. Men of elegance and refinement, not only in Europe but also in America, will tell you that the only Cigarette Paper to use is RIZ LA CROIX.

These light, thin, tough, odorless papers burn freely, but without "paper flavor". The paper, burning, effaces itself. There is no reek. They are tasteless. You get the full, sweet flavor of tobacco alone.

Created from flax linen, these RIZ LA CROIX Cigarette Papers are pure, a purely vegetable product, and are altogether healthful.

We are also sending you a booklet entitled "ROLL YOUR OWN" which shows clearly one way to roll a perfect cigarette.

Very truly yours,

THE AMERICAN TOBACCO CO.

BY-

CROP REPORT

FROM

American Steel & Wire Company

Mailed from Chicago, Ill.

For Week Ending October 19, 1918

Up to and including Thursday preceding above date

CROP REPORT

Note—In naming the sections in states reporting, we follow the U. S. Postal Guide divisions.

SUMMARY

Corn husking started. The corn crop is of very high quality.

Lack of moisture reported from many sections. Pastures losing in condition.

Splendid weather for Fall work. Labor the crop in many sections is up and looking fine.

shortage not prominent.

ILLINOIS

Northern: Pastures in need of rain. Corn in low places damaged by frost. Corn on high land will show very little soft corn and this from late planted. Quality very good and the crop is being gathered in. Husking started in places and in general corn prospects are very bright. Farmers in Winnebago County have not had a corn crop for three years, and this crop looks good to them. Northeast: Pasture poor. Dry weather interfering with wheat seeding. Dairying on a decrease. Corn not injured by frost. Large crops of oats, heat and barley. Corn condition: Cole County—short crop of Eastern: Pastures fair to good; equally divided estimates. Corn County—best crop in several years; good quality. Rock Island County—bulk of corn well matured; Kanakake County—late planting injured by

Italian Censor Stamp

U.S. Private Perforations Schermack Mailing Machine Co.

*Type III
Issue of 1916-1917
Type Ia*

This imperforated stamp was a variation of the 1917-1919 Type I unwatermarked stamp used by the Mail-O-Meter Company for its private perforations process of Schermack Type III and Mail-O-Meter Type IV used on its affixing machines.

The variation came about because of the use of a new transfer roll in the Bureau's printing process around 1919. This new variety was not discovered for many years after it was produced.

That is one reason why there have been so few stamps and covers found. All those discovered have Schermack Type III perforations. No records exist as to how many of this stamp variety were purchased by Mail-O-Meter for their use.

Issue of 1926

The previously shown 1½¢ Harding imperforate stamp was produced on April 4, 1915 for use on third class circular mail because of a rate change from 1¢, effective April 15, 1925.

The Mail-O-Meter Company was at that time owned by Pitney Bowes Company, they still had customers using their Schermack Type III perforated coils in their affixing machines. Still using this value stamp in 1926, the company had to order additional quantities for its customers.

To handle this order for the imperforates the Bureau of Printing used their newer and faster process, the Rotary Press. This process was being used to produce coiled stamps already. Because this was a different process then had previously been used for the imperforates stamps, it produced different spacing between the stamps and gutter spacing between the panes. The Schermack automatic coil producing machines could not produce its standard perforations properly. It would require hand cutting and that was not satisfactory for them, so they returned the stamps to the government.

Assuming that only a few test sheets were processed unsuccessfully and may have been discarded is the reason why so few samples have been found.
